

# Student Learning

## Professional Learning Module

### Contents

Overview of the resource	1
Using the resource	2
What are the principles associated with student learning?	3 - 10
What do students bring to the learning experience?	4
Why should you explore before explain?	5
How important is student engagement?	6
How important is student discussion?	6
What is the 5E model?	7 - 9
What are the variations on the 5E model?	10
What is cooperative learning?	11 - 13
How do you structure cooperative learning?	11
What are the team jobs?	12
What are the team skills?	13
Why is notebooking important in secondary science?	14 - 19
What are the benefits?	15
How do I get my students started?	16 - 17
What can students use as a notebook?	18
Where can I go for further information?	18
References	20

### Overview of the resource

The purpose of this professional learning resource is to think more about student learning. Student learning is a vast area. The module looks at three aspects; learning theories and in particular a suggested model called the 5Es, cooperative learning and the use of notebooking to enhance learning.

#### GUIDE: Student Learning

This written guide provides information which supports the ideas and techniques explored in the digital resources.

#### DVD: Modelling Student Learning

The DVD contains three sections. The first two sections explore the phases of the 5E learning model and cooperative learning in the secondary science classroom. The second chapter on the DVD contains a student resource on notebooking that is referred to in the *Practising Student Learning* CD-ROM.

#### CD-ROM: Practising Student Learning Strategies

The interactive CD-ROM describes, illustrates and provides practise opportunities for the three aspects of student learning covered in this module; the 5E model, cooperative learning and notebooking.
